

RETROFIT**Upgrade 16.4**

The lifetime care programme of Stork recognises various facilities

Updating and retrofit

Technical development does not stand still. New materials, more sophisticated computer systems and additional insights in techniques and systems spawn improvement in design and construction of new installations.

For existing installations to benefit from these developments a large number of modification and expansion packages have been developed thus allowing existing systems to be updated.

Reduce Spill and Improve Hygiene! New Product or Bottle? Fit Stork Filling Valves!

Every Stork customer demands hygienic and precise filling. Therefore we have developed several filling valves that can be fitted in your existing Stork rotary filler, either the vacuum type or weight filler model. The unique Stork valves ensures minimum foam formation and for weight fillers reduction in product spillage, thus resulting in faster filling times, a stable flow of the product and optimum CIP (Cleaning In Place) procedures. We can also supply filling valves for handling fruit fibres and pulp.

**Advantages of New Stork Valves**

- Faster filling times can be reached.
- Suitable to handle all kind of liquids including fibres and pulp.
- Easy installation onto the existing filler.
- A stable flow of the product and optimum cleaning ability.
- Minimum foam formation.
- Minimum product spillage.
- Can also be fitted to non-Stork machines.
- Stork utilises special hygienic P-seals.
